

R & D

RoweMed is very active in development work and product care in cooperation with users, industries, universities and other research establishments. We guarantee the highest standard in order to fulfill the most demanding requirements of pharmaceutical and medical technology industries.

Production

We are manufacturing assembly-intensive and demanding technical products under sterile conditions in our clean room plant. Our production concept is based on high flexibility. The combination of automated manufacturing of components and individual processes allows a cost efficient and high quality production of single products, prototypes and limited series, as well as manufacturing large stocks with up to 5 million pieces.

Regulatory Affairs

RoweMed fulfills all regulatory requirements from authorities and notified bodies. We have 15 years experience in product approval of medical devices and disposables. In addition to our technical services we offer the complete technical documentation according to the requirements of the Medical Device Directive 93/42/EEC.
